

Settop M1 - Setting Up the SIM card

March 2021

How to change the APN settings

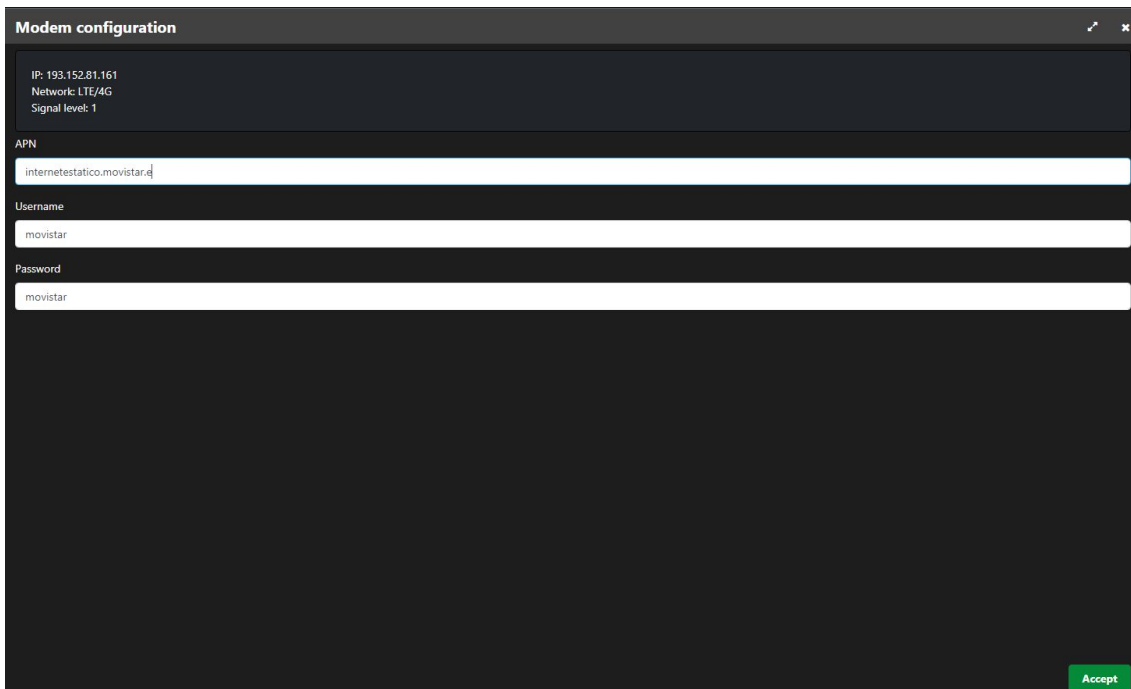

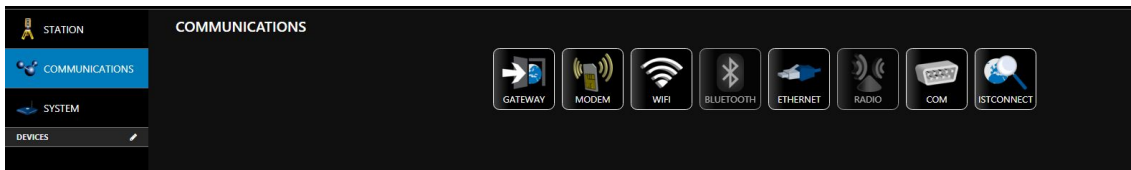

The middle light on the SettopM1 is solid with no SIM card inserted (no SIM detected).

The light is off when the SIM card is inserted (SIM detected, but no coverage).

The light is flashing when it searches for coverage.

By default, SettopM1 is configured with a Spanish APN

1. Go to **Communications** → **Modem**

Key in the correct APN, username and password for the company and press **Accept**

NOTE: Check your APN settings for network worldwide operators (or contact your service provider)
